

# Skytap and Profound Logic

Partnering to make your IBM i business modern and cloud ready

## IBM i Modernization

- Analysis and roadmap
- UI and UX development
- Code and database modernization
- Cloud readiness & portability

## Hybrid IBM i Cloud

- Best of both worlds
- Maintain control of critical operations
- Increase operational capacity & scalability
- Ensure security

Businesses on the IBM i platform have a lot of questions when it comes to their cloud journey.

- Is our system modern enough to support a cloud deployment?
- Which cloud solutions are right for our business?
- What are the benefits to remaining on IBM i after moving to the cloud?

There can be a lot of uncertainty, but the good news is that there are partners available that can answer these questions and support you through every stage of your cloud journey.

**Profound Logic and Skytap** have partnered to bring our expertise with IBM i to businesses like yours and ensure a successful end-to-end approach to modernizing and moving to the cloud.

**By working with us, your business can take advantage of all the benefits of a hybrid cloud solution:**

- Reduced overhead hardware and data center costs
- Better collaboration across teams and better end-user efficiency
- Increased application mobility and portability
- System scalability and flexibility
- Data security

All while retaining the benefits of your IBM i system, such as the many years of custom development you've put into your business applications.

# Cloud Readiness with Profound Logic and Skytap

Modernize and extend your IBM i with the power of Node.js

## About Profound Logic

Profound Logic provides industry-leading solutions for IBM i modernization and development.

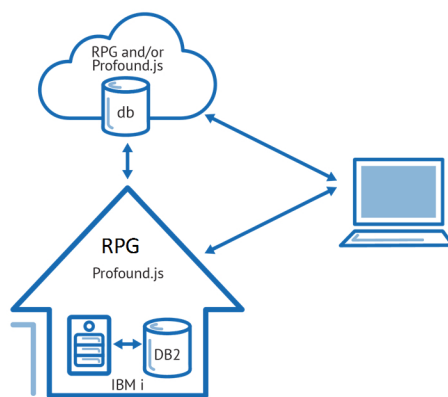

We modernize interfaces, and go beyond - with solutions for web and mobile development, code modernization, modern databases, web services and Rest API, and cloud-readiness.

Our Node.js solutions enable businesses to deliver scalable, portable, and future-proof applications.

We have offices in Ohio, Wisconsin, California, and Mississippi, in addition to partners located around the world. Learn more at [profoundlogic.com](http://profoundlogic.com) or contact us at 877-224-7768.

We've spoken to many businesses on IBM i who think it will be difficult and expensive to move their RPG applications to a cloud environment.

With a hybrid solution, you will host some programs or data in a cloud environment while keeping others on your local system. This enables you to enjoy the benefits of both options, but does require that you have both onsite hardware and a cloud hosting account.

*A Hybrid Cloud model using Profound.js*

Profound Logic's market-leading solutions offer an agile approach to user interface, code, and database modernization, and prepare your business apps for the cloud. Profound.js provides the tools to connect data, convert legacy application code, and make apps portable using Node.js, which runs natively on IBM i.

The benefits of this approach are:

- There's no need to migrate all existing software and data
- There is increased scalability and resiliency where needed
- You maintain control over sensitive data
- You can maintain the core system on-premise so local users aren't affected by internet access

By partnering with Profound and Skytap, you can relax knowing we're IBM i experts and offer the best solutions for modernization, cloud enablement, and cloud services for Power Systems.
